

# Testimonials

“ When we gave back the other batch of lithium batteries it became quite apparent that the batteries lasted substantially longer than the original batteries distributed with the radios. The newest set of GTS lithium batteries lasted at least 24 to 28 hours when left on. I’ve gone three eight hour shifts without charging the battery. ”

- Honolulu Police Department

“ The GTS batteries perform much better than publicized, and many officers only charge their batteries once a week. I personally used my issued battery over a special operation in Las Vegas, working 4 twelve hour shifts without recharging the battery.

At the present time, I have 95 radios and will purchase batteries and chargers from GTS for this equipment. Their batteries have made our portables more functional in the field, and I will not send a new unit to the field without a GTS battery. I believe a non-functional portable radio is a greater officer safety issue than a non-functional firearm.

- Radio Program Manager - Nevada Highway Patrol Division

“ All of our deputies reported the batteries maintained a charge of 40 hours before needing to be recharged. Each deputy also reported a noticed difference in the ability to receive and transmit information over their HTs. All four deputies reported their HTs maintained excellent reception with the new batteries & every time they keyed their microphone, they were able to get out on their HT. Not one of the deputies experienced any radio problems while using the new battery.

- Riverside County Sherriff’s Department

“ Washoe County is very pleased with our decision to switch to the GTS Lithium Polymer Battery. We have already realized a close to three-fold increase in battery life compared to other batteries. An added benefit has been the lighter weight of the GTS Battery. Our patrol personnel have been enthusiastic with our decision. ”
