

AARP 2020 Tech Survey had the surprising finding that adults over 50 are adopting new technologies such as smartphone, wearables, home smart speakers, and smart home technology, at about the same pace as 18-49 year olds.

Facilities for older adults will quicken the pace of investing in technology. A Ziegler survey at end of 2018 found that 74% of senior living organizations had invested in high-speed internet connectivity and wireless technology in the past 12 months.

Modernize the Long-Term Care Experience with Elo

Technology driven experiences can engage, educate and personalize care for residents in care facilities. But what can it do for providers? For healthcare organizations, interactive solutions deliver meaningful improvements to resident health, administrative burdens and the process of care delivery.

Visitor Management & Access Control

Enhance resident safety with an easy-to-deploy and adaptable self-service kiosk capable of administering digital wellness questionnaires and contactless temperature checks at building entry.

Virtual Health Care

Provide residents with a convenient extension of the doctor's office, enabling access to virtual care or specialty consults, saving time and increasing satisfaction.

Resident Engagement

Provide residents interactive touchscreens for in-room and group gathering hubs displaying entertainment, activities and education content.

Clinical Documentation

Empower caregivers with interactive AiO touch computers streamlining care documentation and administrative tasks. Modernizing this process increases accuracy and lowers the burden on your staff.

Elo offers touchscreen product solutions for a variety of healthcare applications -

Ranging from nurse stations and patient education to patient check-in and pharmacy check out.
